

L5P Duramax EZ Lynk Setup Instructions

Step One: Download & Install the AutoAgent App (DO NOT DOWNLOAD THE ELD APP)

The AutoAgent app is available for most smart devices. It requires iOS 8+ or Android 5+ to operate.

Step Two: Create an Account

From the AutoAgent app, select 'create an account'. You will need to verify that your email address is valid upon creation.

Step Three: Place Your Key in the 'Run' Position

Turn your key all the way over without starting the vehicle. This will boot your vehicle's engine computer allowing the AutoAgent to communicate with it. If you have a push-to-start vehicle, you should press the Start button twice.

Step Four: Plug the AutoAgent into your OBD-II Port

With the key in the 'Run' position, plug your AutoAgent into your vehicle's On-Board Diagnostics port. You can verify that it has booted correctly when you see that a blue and green light are illuminating from the device.

Step Five: Connect to your AutoAgent from your Smart Device

Navigate to the WiFi settings of your smart device and select the 'EZLYNK_####' network. A check mark will appear next to the network name when you have

successfully connected. The AutoAgent 2 also allows you to connect via Bluetooth.

Step Six: Open the AutoAgent App

After you've successfully connected, you can navigate back to the AutoAgent app. You should now be able to see your vehicle gauges.

Step Seven: Link your Vehicle

When it asks you the email of your tuner, you will put in ezlynk@runvse.com. If your smart device has cellular data, you will notice that a message has appeared asking you to link the vehicle. Follow these prompts to connect your vehicle with your mechanic/technician. If your smart device does not have cellular data, you will need to connect to an internet available network and re-open the app to complete the linking process.

Step Eight: Submit a Tech Ticket

L5P Profiles are not yet able to be automatically added. To receive your profiles, go to runvse.com and submit a tech ticket with your Order #. Files will then be manually pushed to your profile

Step Eight: Program Your Vehicle After completing the linking steps you are ready to flash your vehicle.

Navigate to > Vehicle > ECU Profiles. Here you can view the list of tunes or ECU profiles that are available to you.

Tap the button to download your desired ECU profile, followed by the 'Install' button to flash your vehicle. The app will guide you through the flashing procedure.

(When using a smart devices without cellular data you will need to switch to an internet available network to download the ECU profile, then back to the EZ LYNK network to install the ECU profile.)
